WEEK 1

Question 1. Develop a HTML page which include basic html tags, table, list, image and links.

```
<html>  
    <head>PET ADOPTION</head>  
    <title>Adopt don't buy</title>  
<body style="background-color:orange;">  
  
    <h4 align='center'>  
<a href="#" style="background-color: #ffffff">Home</a>  
&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&~  
<a href="#" style="background-color: #ffffff">Categories</a>  
&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&~  
<a href="#" style="background-color: #ffffff">About us</a>  
&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&~  
<a href="#" style="background-color: #ffffff">Contact Us</a>  
&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&~  
</h4>  
<br>  
<br>  
<br>
```

<p>It has been over eleven years that the “Adopt, Don’t Shop” campaign was launched by a Los Angeles based nonprofit animal advocacy organization, Last Chance for Animals. This is an international campaign to raise awareness about the benefits of adopting rescued pets instead of puppies from pet stores that are bought from puppy mills. Over the course of as many as eleven years, this slogan has been used and promoted by a growing number of animal right proponents. Many of us might think that by now, there would’ve been a widespread increase in the knowledge of prospective pet owners, but sadly that’s not the case.</p>

```
<br>
<br>
<table>
  <tr>
    <th>Pet</th>
    <th>Breed</th>
  </tr>
  <tr>
    <td>Dog</td>
    <td>Lebra</td>
  </tr>
```

```
<tr>
  <td>Cat</td>
  <td>Pesica</td>
</tr>
</table>

</body>
</html>
```

WEEK 2

Question 2. Develop a Student Login form with Login Id , Password, submit, reset buttons and also allow to have forget password link.

```
<html>
<head style="text-align:center ; color:blue;">
<title>
LOGIN
</title><br><br><br><br><h1>
LogIn Here <br><br></h1>
<head>
<body align="center" bgcolor="pink">
<form>
Login id:
<input type="text">
<br><br>
Password
<input type="password">
<br><br>
<input type="button" value="submit"> &nbsp;
<input type="button" value="reset">
<br><br>
<a href="pswd.html"> Forget password?? </a>
</form>
</body>
</html>
```

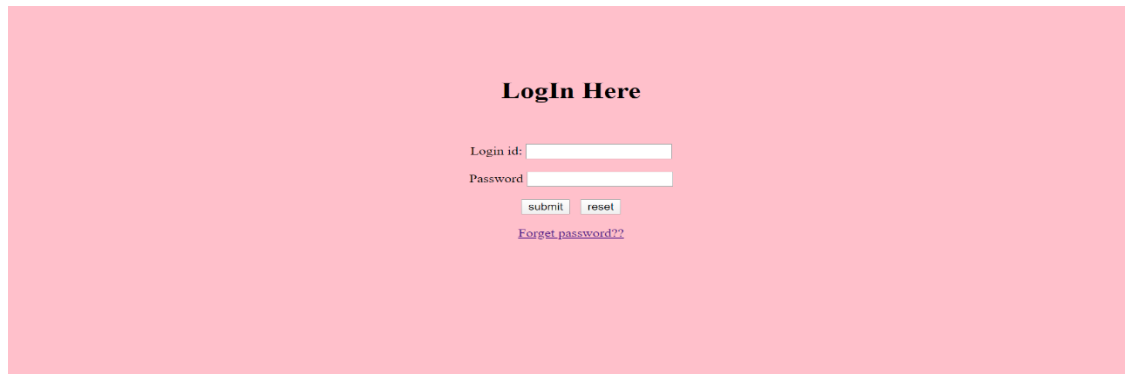

//second html page for forget password

```
<html>
<head><b><br><br><br><br>
<br><br>

Forget password!! recover it by entering your mail id below </b></head><br><br>
<body align="center" bgcolor="pink">
<form>
Enter your registered mail id: <br>
<input type="email"><br><br>

<input type="button" value="send OTP"><br><br>
</form>
</body>
</html>
```

//output

Login id:

Password

[Forget password??](#)

Forget password!! recover it by entering your mail id below

Enter your registered mail id:

Question 3. Develop a student (Name, RollNo) registration form by using HTML forms, textfield , button, checkbox, radiobutton, hidden button, textarea.

```
<Html>
<head >
<title>
Registration Page
</title> <h1><b> <u>
Register here</h1></b></u>
</head>
<body bgcolor="pink">

<form>

<label> Firstname </label>
<input type="text" name="firstname" size="15"/> <br> <br>
<input type="hidden" id="Id" name="Id" value="3487">
<label> Lastname: </label>
<input type="text" name="lastname" size="15"/> <br> <br>
<label> Roll number:</label>
<input type="text" name="rollno." size="15"/> <br> <br>
```

```

<label>
Course :
</label>
<select>
<option value="Course">Course</option>
<option value="MCA">MCA</option>
<option value="Mtech">Mtech</option>
</select>
<br>
<br>
<label>
Gender :
</label><br>
<input type="radio" name="male"/> Male <br>
<input type="radio" name="female"/> Female <br>
<input type="radio" name="other"/> Other
<br>
<br>
Email:
<input type="email" id="email" name="email"/> <br>
<br> <br>
Password:
<input type="Password" id="pass" name="pass"> <br>
<br> <br>
Re-type password:
<input type="Password" id="repass" name="repass"> <br> <br>
<label>
Phone :
</label>
<input type="text" name="country code" value="+91" size="2"/>
<input type="text" name="phone" size="10"/> <br> <br>
Address
<br>
<textarea cols="30" rows="5" value="address">
</textarea>
<br> <br>
<input type="button" value="Submit"/>
</form>
</body>
</html>

```

//Output

WEEK 2

Question 4. Develop a HTML page which has used inline and internal type CSS.

HTML FILE

```
<html>
```

```
<head>
```

```
<title>Login</title>
```

```
<style>
```

```
body
```

```
{
```

```
background-color: powderblue;
```

```
}
```

```
button{
```

```
background-color: white;
```

```
width: 250px;
```

```
height= 500px;
```

```
background-color: rgba(0, 255, 0, 0.3);
```

```
color: black;
```

```
font-size: 16px;
```

```
padding: 10px 24px;
```

```
border-radius: 2px;
```

```
transition-duration: 0.4s;
```

```
border: 1px solid white;
```

```
box-shadow: 0 8px 16px 0 rgba(0,0,0,0.2), 0 6px 20px 0 rgba(0,0,0,0.19);
```

```
}
```

```
.button:hover {
```

```
background-color: #4CAF50; /* Green */
```

```

        color: white;
    }

</style>
</style>
</head>
<body >

<form>

<br>

<br>

<br>

<div align='center' style="color:black; background-color:powderblue; font-family:verdana; font-
size:100%; margin-top:30px" >

    <br><br><br>

    Username: &nbsp;&nbsp;&nbsp;&nbsp;<input type="text" placeholder="Enter Username" name="uname" r
equired><br><br>

    Password: &nbsp;&nbsp;&nbsp;&nbsp;<input type="password" placeholder="Enter Password" name
="psw" required><br><br><br>

    <button type="submit">Submit</button><br><br>

    <input type="checkbox" checked="checked" name="remember me"> Remember me
<br>

<br>

<div style="background-color:#asghka" align='center'>

    <button id='button1' type="button">Reset Password</button><br><br>

    <a href="changepswd.html">Click here to create new password</a><br><br><br>

</div>

```

</div>

</form>

    }

    else
    {
        alert('Sucessfully Registered');
        return true;
    }
}

```

The image shows a web form titled "Registration Form" set against a green background with a paw print pattern. The form is a dark grey rectangle with white text and input fields. It contains the following fields: First Name (text input with 'abc'), Last Name (text input with 'xy'), Email (text input with 'radhika003mca19@igdluw.'), Phone Number (text input with '7899892200'), Address (text input), favourite Pet (dropdown menu with '--Choose--'), Password (text input with 'Enter Password'), and Confirm Password (text input with 'Confirm Password'). A 'Submit' button is located at the bottom right of the form. In the bottom right corner of the image, there is a watermark that says 'Activate Windows'.

Question 9. Write a javascript to handle onclick, onchange, onfocus, onmouseover, onload, onsubmit events.

```
<html>

<head>

  <title></title>

  <style>

    div

    {

      width: 100px;

      height: 100px;

      border: 1px solid black;

      margin: 10px;

      float: left;

      padding: 30px;

      text-align: center;

      background-color: lightgray;

    }

    p

    {

      background-color: white;

    }

  </style>

  <script>

    function changeColor(ele,clr)

    {

      ele.style.color = clr;

    }

  </script>
```

```
function OnSelectionChange (select)
{
    var selectedOption = select.options[select.selectedIndex];
    alert ("The selected option is " + selectedOption.value);
}
```

```
function OnFocusInput (input)
{
    input.style.color = "red";
}
```

```
function OnBlurInput (input)
{
    input.style.color = "";
}
```

```
var x = 0;
var y = 0;
var z = 0;
```

```
function myMoveFunction()
{
    document.getElementById("demo").innerHTML = z+=1;
}
```

```
function myEnterFunction()
{
    document.getElementById("demo2").innerHTML = x+=1;
}
```

```
function myOverFunction()
```

```

    {
        document.getElementById("demo3").innerHTML = y+=1;
    }

function loadImage()
{
    alert("Image is loaded");
}

function myFunction()
{
    alert("The form was submitted");
}
</sc

</script>
</head>

<body>

    <h2 onclick="changeColor(this, 'red')">Click here to change text color red.</h2>

    <h2>Select your favourite colour:</h2>
    <select onchange="OnSelectionChange(this)">
        <option value="Red" />Red
        <option value="pink" />pink
        <option value="blue" />blue
    </select>

    <input type="text" onfocus="OnFocusInput (this)" onblur="OnBlurInput (this)" value="

```

<h3>This example demonstrates the difference between onmousemove, onmouseenter and onmouseover.</h3>

<p>The onmousemove event occurs every time the mouse pointer is moved over the div element.</p>

<p>The mouseenter event only occurs when the mouse pointer enters the div element. </p>

<p>The onmouseover event occurs when the mouse pointer enters the div element, and its child elements (p and span).</p>

<div onmousemove="myMoveFunction()">

<p>onmousemove:
 Mouse over me!</p>

</div>

<div onmouseenter="myEnterFunction()">

<p>onmouseenter:
 Mouse over me!</p>

</div>

<div onmouseover="myOverFunction()">

<p>onmouseover:
 Mouse over me!</p>

</div>

<form onsubmit="myFunction()">

UserName: <input type="text">

<input type="submit">

</form>

</body>

<html>

[Click here to change text color red.](#)

Select your favourite colour:

pink ▼

OnFocus OnBlur

This example demonstrates the difference between `onmousemove`, `onmouseenter` and `onmouseover`.

The `onmousemove` event occurs every time the mouse pointer is moved over the div element.

The `mouseenter` event only occurs when the mouse pointer enters the div element.

The `onmouseover` event occurs when the mouse pointer enters the div element, and its child elements (p and span).

onmousemove:
35

onmouseenter:
5

onmouseover:

```

Question 11. Write a Java Script to illustrate how to create user-defined objects.

```

<!DOCTYPE html>
<html>
<head>
<style>

    *{
        margin: 0;
        padding: 0;
    }

    body{
        background-image:
url('https://assets.gqindia.com/photos/5cdc0a55700a77f307a9f48f/master/pass/top-image88.jpg');
        background-position: center;
        background-size: cover;
        font-family: sans-serif;
        margin-top: 20px;
        font-size:40px;
    }

```

```

    }
    div{
        margin-top:160px;
        margin-left:70px;
    }
</style>

<body>

<div>
<h2>IPL TEAMS</h2>
<p id="para"></p>
<script>
    // Create an object:
    var IPL_teams = {
        team1: "CSK",
        team2 : "RCB",
        team3: "DD",
        team4 : "MI",
        team5: "SRH",
        team6 : "RR",
    };

    // Display some data from the object:
    document.getElementById("para").innerHTML =
        IPL_teams.team1 + " " + IPL_teams.team2+ " " + IPL_teams.team3+ " " + IPL_teams.team4+ "
" + IPL_teams.team5;+ " " + IPL_teams.team6;
    </script>
</head>
</div>
</body>
</html>

```

Question 12. Write a Javascript to illustrate the use of Hidden field

```
<html>
<head>
  <title>Hidden fields</title>
</head>
<style>

  *{
    margin: 0;
    padding: 0;
  }
  body{
    background-image: url('https://www.garmento.net/wp-
content/uploads/2016/07/white_parallax_brick_full.jpg');
    background-position: center;
    background-size: cover;
    font-family: sans-serif;
    margin-top: 20px;
  }
  div{
    margin-top:160px;
    margin-left:70px;
  }
</style>
<body>

<script type="text/javascript">
function show(){
  alert(document.getElementById('Fname').value);
  alert(document.formName.elements['fn'].value);
}
</script>

<h1>Show Hidden value </h1>
<div>

  <input type=hidden id='Fname' name="fn" value='Radhika'/>

  <input type=button class="myButton" value="Get Value" onclick="show()" />

</div>
</body>
</html>
```

Question 13. Write a Javascript to perform the following using Cookies:

- Create Cookie**
- Read Cookie**
- Delete Cookie**

```
<html>
<head>
<script>
function setCookie(cname,cvalue,exdays) {
    var d = new Date();
    d.setTime(d.getTime() + (exdays*24*60*60*1000));
    var expires = "expires=" + d.toGMTString();
    document.cookie = cname + "=" + cvalue + ";" + expires + ";path=/";
}
```

```
function getCookie(cname) {
    var name = cname + "=";
    var decodedCookie = decodeURIComponent(document.cookie);
    var ca = decodedCookie.split(';');
    for(var i = 0; i<ca.length; i++) {
        var c = ca[i];
        while (c.charAt(0) == ' ') {
            c = c.substring(1);
        }
        if (c.indexOf(name) == 0) {
            return c.substring(name.length, c.length);
        }
    }
    return "";
}
```

```
function checkCookie() {
    var user=getCookie("username");
    if (user != "") {
        alert("Welcome again " + user);
    }
}
```

```

    } else {
        user = prompt("Please enter your name:", "");
        if (user != "" && user != null) {
            setCookie("username", user, 30);
        }
    }
}
</script>
</head>
<body onload="checkCookie()"></body>
</html>

```

Question 14. Perform following validations using javascript:

- Validate the numeric input of data on a text box
- If any field is empty then an alert message should get displayed
- Date and email format validations

HTML

```

<html>
<head>
    <title></title>
    <link rel="stylesheet" href="14ValReg.css">
    <script src="14validationRegistration.js"></script>

</head>

<body>

Go to Settings to activate Windows.

15. Create an XML document as shown below and add CSS for styling and DTD for validation.

XML

```
<?xml-stylesheet type="text/css" href="xmlcss.css"?>
<!DOCTYPE people SYSTEM "15xmldtd.dtd">
<people >
<heading>XML VALIDATION</heading>
    <husband employed="Yes">
        <name>Mark</name>
        <age>45</age>
        <wife>
            <wname>Janet</wname>
            <age>29</age>
        </wife>
    </husband>
    <husband employed="No">
        <name>Matt</name>
        <age>42</age>
        <wife>
            <wname>Annie</wname>
            <age>43</age>
        </wife>
    </husband>
</people>
```

CSS

```
people {
    background-image: url('https://encrypted-
tbn0.gstatic.com/images?q=tbn%3AANd9GcTyztluaSZiCRHBMosbvlzFqO-
9RIPP9796gQ&usqp=CAU');
    background-position: center;
    background-size: cover;
    font-family: sans-serif;
    margin-top: 20px;
    font-size:40px;
    width: 100%;
}
heading {
    color: brown ;
    font-size : 40px;
    margin-top: 70px;
    margin-left: 90px;
    margin-right: 90px;
    text-align: center;
    border: 3px solid green;
    background-color : rgb(1, 23, 26);
}
heading, wname, name, age, wife {
    display : block;
    margin-left: 90px;

<!ELEMENT wname (#PCDATA)>
]>
```

WEEK 6

Question 16. Create a simple business card(name , phone(type-work and home), email id, company name) in xml.

```
<?xml version="1.0" encoding="UTF-8"?>
<?xml-stylesheet type="text/css" href="Business.css"?>
<businesscard>

    <name>Bharti Dua</name>
    <phone type="Work">8700566293</phone>
    <email>bhartidua100@gmail.com</email>
    <company>ETI Labs Pvt. Ltd.</company>

</businesscard>
```

CSS File:

```
businesscard
{
    font-family:Trattatello;
    font-size: 18px;
    color: black;
    display: block;
    padding: 10px;
    margin: 20px;
    background-color:#abf89c;
    width: 400px;
    border: 5px;
    border: 2px solid;
    text-align: left;
}

name
{
    display: block;
    font-weight: bold;
}

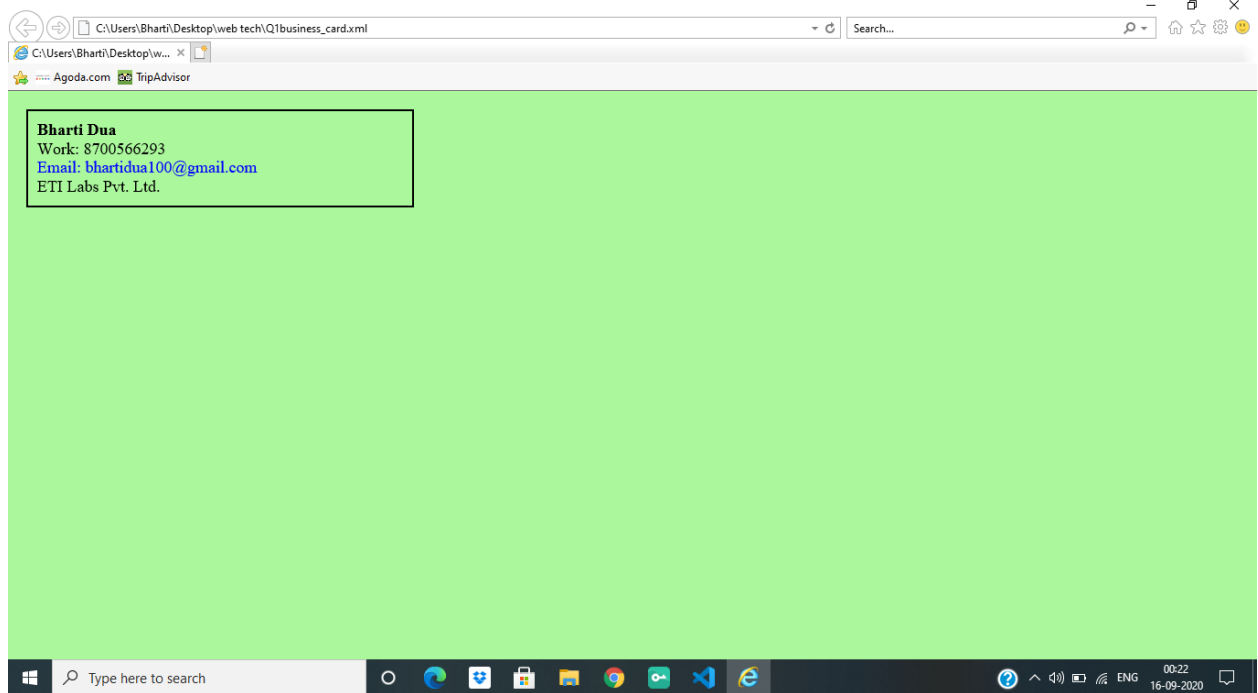

phone
{
    display: block;
}

company
{
    display:block;
}

email
{
```

```
display: block;
color: Blue;
}
```

```
email:before { content: "Email: " }
phone:before { content: attr(type) ": " }
phone[primary]:after { content: "(" attr(primary) ")" }
```

Question 17 .Create XML for :

ProductListing

Product

name

description

price

```
<?xml version="1.0" encoding="UTF-8"?>
<?xml-stylesheet type="text/css" href="product.css"?>
<productlisting>
<product>
  <name>Hand Bag</name>
  <description>Latest design,trendy and classy for casual outing</description>
  <price>Rs. 500</price>
</product>
<product>
  <name>Dress</name>
  <description>Simple, Beautiful Cotton Dress suitable for summers. </description>
  <price>Rs.2000</price>
</product>
<product>
  <name>Earrings</name>
  <description>Elegant and Stylish earrings for all purpose.</description>
```

```
<price>Rs. 200</price>
</product>
```

```
</productlisting>
```

CSS File:

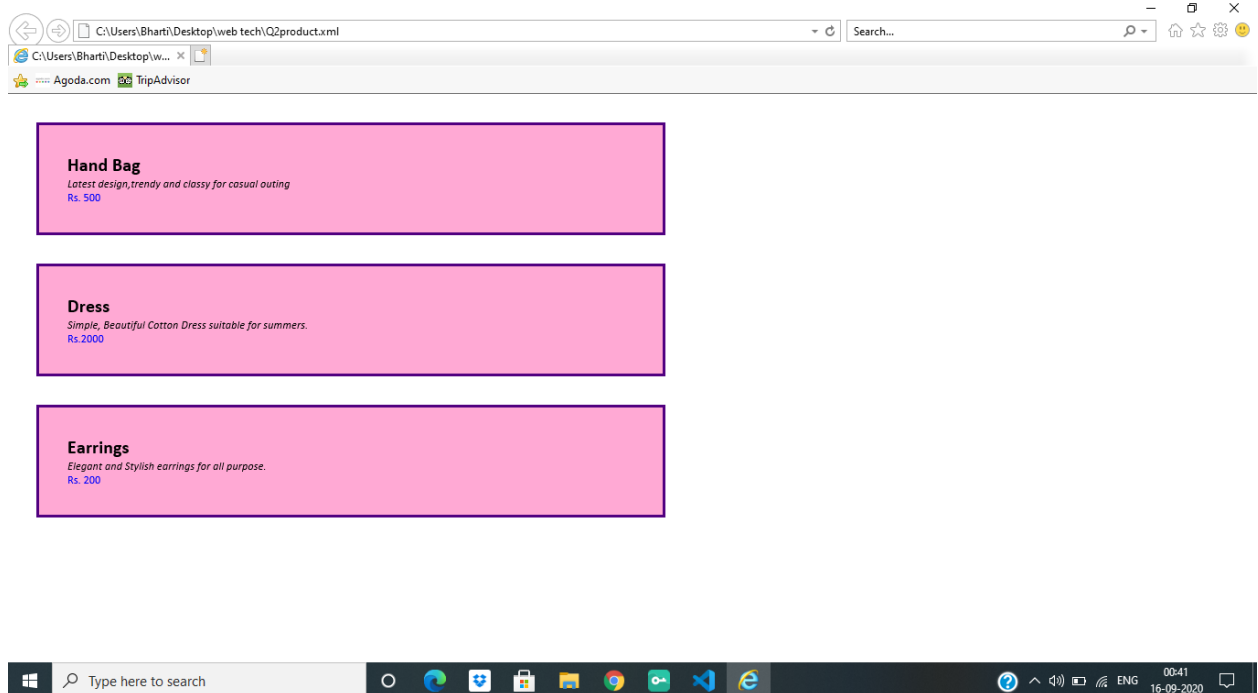

```
product{
font-family : Calibri;
font-size: 8px;
background-color : rgb(255, 169, 212);
display: block;
padding: 20px;
margin: 20px;
border: 2px solid;
border-color: rgb(81, 0, 128);
color: black;
width: 400px
```

```

}
name {
color: black;
font-size : 13px;
font-weight : bold;
}
description{
display : block;
font-style: italic;
```

```

}
price{
color: blue;
display: bold;
}
```

Q18. ADD CSS (Business.css and Product.css) styling for Businesscard.xml and Product.xml

CSS added in Q1, Q2

WEEK 7

Question 19. CREATE BOOK.XML AND VALIDATE IT USING BOOK.DTD

```
<mybooks>
  <book>
    <bookname></bookname>
    <bookid></bookid>
    <bookdescription>

    </bookdescription>

  </book>
  <book>
    <bookname></bookname>
    <bookid></bookid> <desc>

</desc> </book>

</mybooks>
```

CODE

XML file :

```
<?xml version="1.0" encoding="UTF
8"?>
```

```
<!DOCTYPE mybooks SYSTEM
"bookss.dtd">
```

```
<mybooks>
```

```
<book>
```

```
<bookname>"Web
Tech"</bookname>
```

```
<bookid>10</bookid>
```

```
<bookdescription>Introduction to
Web</bookdescription>
```

```
</book>
```

```
<book>
```

```
<bookname>"Basics of
HTML/CSS"</bookname>
```

```
<bookid>123</bookid>
```

```
<bookdescription>New
Edition</bookdescription>
```

```
</book>
```

```
</mybooks>
```

DTD file :

```
<?xml
version="1.0"
encoding="UTF
8"?>
```

```
<!ELEMENT mybooks
(book+)>
```

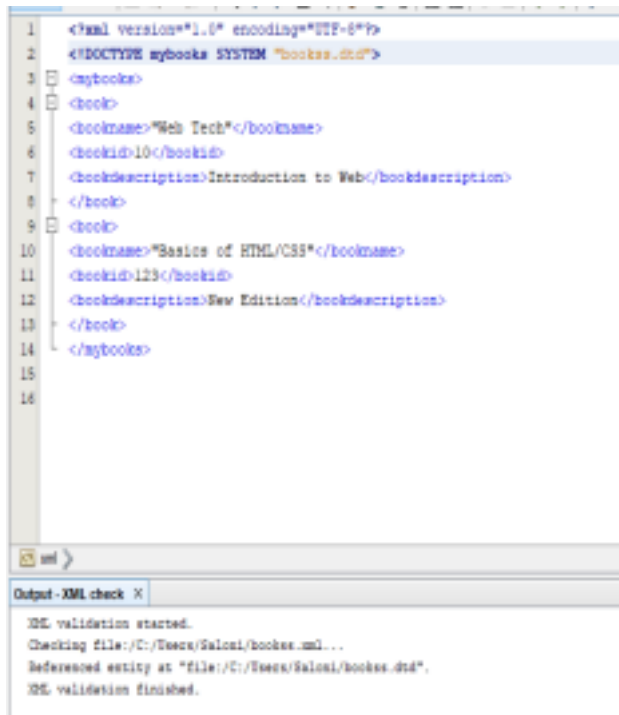

```
<!ELEMENT book
(bookname,bookid*,
(bookdescription|des
c?))>
```

```
<!ELEMENT bookname
(#PCDATA)>
```

<!ELEMENT bookid
(#PCDATA)>

<!ELEMENT bookdescription
(#PCDATA)>

OUTPUT :

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <!DOCTYPE mybooks SYSTEM "books.dtd">
3 <mybooks>
4 <book>
5 <bookname>"Web Tech"</bookname>
6 <bookid>10</bookid>
7 <bookdescription>Introduction to Web</bookdescription>
8 </book>
9 <book>
10 <bookname>"Basics of HTML/CSS"</bookname>
11 <bookid>123</bookid>
12 <bookdescription>New Edition</bookdescription>
13 </book>
14 </mybooks>
15
16
```

Output - XML check X

XML validation started.
Checking file: C:/Users/Saloni/books.xml...
Referenced entity at "file:/C:/Users/Saloni/books.dtd".
XML validation finished.

Question 20. CREATE XML OF CATALOG.XML AND VALIDATE USING SCHEMA. PRICE RANGE (10-100), ALL THE ELEMENTS SHOULD BE IN THE SAME ORDER.

Code –

Xml file :

```
<?xml version="1.0" encoding="UTF-8"?>

<catalog xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="catalogg.xsd"> <cd>
    <title>Empire Burlesque</title>
    <artist>Bob Dylan</artist>
    <country>USA</country>
```

```

<company>Columbia</company>
<price>10</price> </cd> <cd>
<title>Hide your Heart</title>
<artist>Bonnie Carlson</artist>
<country>Bulgaria</country>
<company>London</company>
<price>90</price> </cd>
</catalog>

```

Schema File :

```

<?xml version="1.0"?>
<xs:schema version="1.0"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  elementFormDefault="qualified"> <xs:element
  name="catalog">
    <xs:complexType>
      <xs:sequence>
        <xs:element ref="cd" minOccurs="1" maxOccurs="unbounded"/>
      </xs:sequence> </xs:complexType> </xs:element>

    <xs:element name="cd">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="title" minOccurs="0" maxOccurs="1"
            type="xs:string"/> <xs:element name="artist" minOccurs="0"
            maxOccurs="1" type="xs:string"/> <xs:element name="country"
            minOccurs="0" maxOccurs="1" type="xs:string"/> <xs:element
            name="company" minOccurs="0" maxOccurs="1"
            type="xs:string"/> <xs:element name="price">
              <xs:simpleType>
                <xs:restriction base="xs:integer">
                  <xs:minInclusive value="10"/>
                  <xs:maxInclusive value="100"/>
                </xs:restriction> </xs:simpleType>
              </xs:element>
            </xs:sequence>
          </xs:complexType>
        </xs:element>
      </xs:schema>

```

OUTPUT

The screenshot shows an XML editor with a file named 'catalog.xml'. The XML content is as follows:

```

1 <?xml version="1.0" encoding="UTF-8"?>
2 <catalog xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
3   xsi:schemaLocation="catalog.xsd">
4   <cd>
5     <title>Empire Baroque</title>
6     <artist>Bob Dylan</artist>
7     <country>USA</country>
8     <company>Columbia</company>
9     <price>10</price>
10   </cd>
11   <cd>
12     <title>Hide your Heart</title>
13     <artist>Bonnie Carbone</artist>
14     <country>Bulgaria</country>
15     <company>London</company>
16     <price>9</price>
17   </cd>
18 </catalog>

```

Below the editor, the 'Output - XML check' window shows the validation results:

```

XML validation started.
Checking file: C:\Users\Saloni\catalog.xml...
Referenced entity in "file: C:\Users\Saloni\catalog.xsd".
XML validation finished.

```

Question21

CREATE

STUDENT.XML (STUDENTS(STUDENT(NAME,AGE,ROLLNO,COURSE)))AND VALIDATE IT USING SCHEMA . RESTRICTION ON AGE(18-25),ROLLNO(1-70) AND NUMERIC VALUE ALLOWED ON ROLLNO AND AGE. RESTRICTION ON COURSE USING ENUMERATION(MCA,BTECH,MTECH)

Code –

XML file :

```

<?xml
version="1.0"
encoding="UTF
8"?>

```

```

<students

```

```

xmlns:xsi="http://
www.w3.org/200
1/XMLSchema
</student>

```

```

</students>

```

Schema File :

```

<?xml version="1.0" encoding="UTF-8"?>

```

```

<xs:schema version="1.0"

```

```

xmlns:xs="http://www.w3.org/2001/XMLSchema"

```

```

elementFormDefault="qualified">

```

```
<xs:element name="students">
  <xs:complexType>
    <xs:sequence>
      <xs:element ref="student" minOccurs='1'
        maxOccurs='unbounded' /> </xs:sequence>
    </xs:complexType>
  </xs:element>
```

```
<xs:element name="student">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="name" minOccurs='0' maxOccurs='1'
        type='xs:string' /> <xs:element name="rollno">
        <xs:simpleType>
          <xs:restriction base="xs:integer">
            <xs:minInclusive value="1" />
            <xs:maxInclusive value="70" />
          </xs:restriction>
        </xs:simpleType>
      </xs:element>
      <xs:element name="age">
        <xs:simpleType>
          <xs:restriction base="xs:integer">
            <xs:minInclusive value="18" />
            <xs:maxInclusive value="25" />
          </xs:restriction>
        </xs:simpleType>
      </xs:element>
      <xs:element name="course">
        <xs:simpleType>
          <xs:restriction base="xs:string">
```

Output:

WEEK 10

Ques 25 : Write a simple PHP script which will check the following on user input data:

- Enter your university name:
- length of the input is greater than 10 then show an error
- Input is equals to igdtuw then display ok otherwise show an error
- Display reverse of the data

PHP Code: (uni.php)

```
<html>
<head>

<title> Operations using PHP </title>

</head>

<body>

<form action="qst1.php" method="post">

Enter your University name <input type="text" name="string_value" required/>

<input type="submit" value="check"/>

</form>

</body>

</html>
```

PHP Code: (validations)(qst1.php)

```
<html>

<body>

<?php

$string= $_POST['string_value'];
```

```
$string_check="igdtuw"; if(strlen($string)
>=10)

    echo("ERROR! Length should be less than 10 ; "); if($string ==
$string_check)

echo "OK";

else

echo("ERROR! Not the correct university name ; ");

    echo("; Reverse of the string is: ");
    echo strrev($string);

?>

</body>

</html>
```

Output:

}

?>

</body>

</html>

```

OUTPUT:

ADDITION:

Lab 12

Ques 1: You are required to read the contents of the file studentsInfo.txt (having roll no of students) line by line and display it to the browser window. Further, write the file contents back to a new file called yourName.txt (marks of students).

Code:

PHP Code for reading the file StudentsInfo.txt line by line and writing the content back in temp.txt

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>File Handling</title>
</head>
<body>
<style
>
div{
  margin:auto
  ; color:Red;
}
</style>
<H1>Reading and Writing to a file</H1>
<div>
  <?php
    $myfile = fopen("StudentsInfo.txt", "r") or die("Unable to open file!");
    $mywfile = fopen("temp.txt", "w");
    while(!feof($myfile)) {
      $txt = fgets($myfile);
      fwrite($mywfile,$txt);
      echo "<h3>". $txt."</h3>";
    }
    fclose($myfile);
    fclose($mywfile
  );
  ?>
</div>
```

```
</body>
</html>
```

Output:

Ques 2: To create a php program to demonstrate the different file handling methods.

Code:

1. Opening and Reading a file - with fread()

PHP Code:

```
<?php
    $filename="f1.txt";
    $fp=fopen($filename, "r");
    //opening a file
    $contents = fread($fp, filesize($filename));
    //reading a file
    echo "<pre> $contents </pre>"; //displaying the data from the file on screen
    fclose($fp);
?>
```

1. Opening and reading a file - with fgets()

PHP Code:

```
<?php
    $filename="f1.txt";
    $fp=fopen($filename, "r");
    //opening a file in read mode echo
    fgets($fp);
    //displaying the data from the file on screen
    fclose($fp);
```

?>

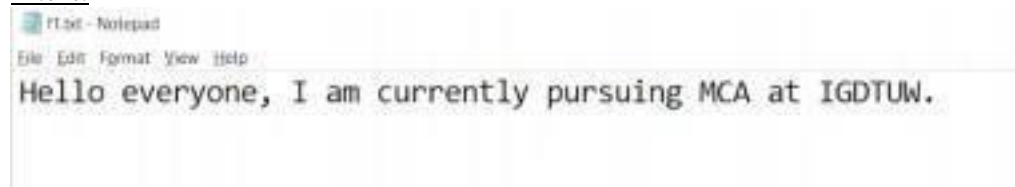

1. Opening and reading a file - with fgetc()

PHP Code:

```
<?php
$filename="f1.txt";
$fp=fopen($filename, "r"); //opening a file in read mode
while(!feof($fp)) //until end of file is reached
{
    echo fgetc($fp);
}
fclose($fp);
?>
```

Output:

f1.txt:

On browser (fread()):

On browser (fgets()):

Hello everyone! I am currently pursuing MCA at IGDTUW. I am a 2nd year student.

On browser (fgetc()):

1. Writing in a file

PHP Code:

```
<?php
```

```
?>
```

Output:

newfile.txt

```
$myfile = fopen("newfile.txt", "w") or die("Unable to open file!");
```

```
$txt = "WEB TECHNOLOGY\n";
```

```
fwrite($myfile, $txt);
```

```
$txt = "MCA\n"; fwrite($myfile,  
$txt); fclose($myfile);
```

1. Delete a file

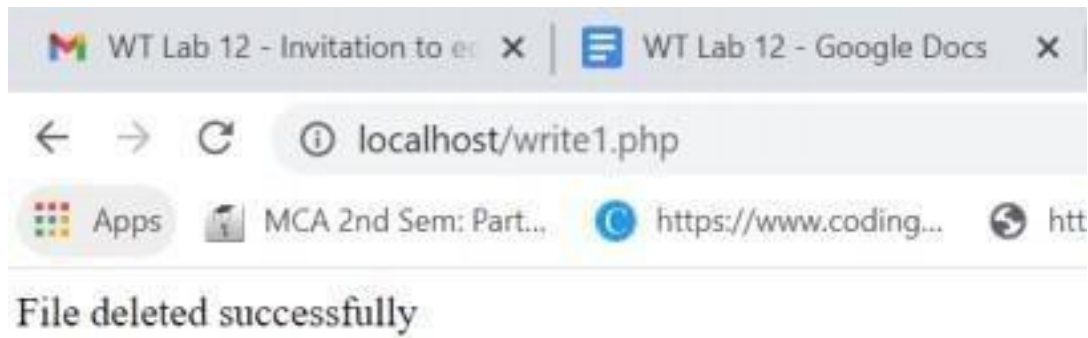

PHP Code:

```
<?php
```

```
unlink('newfile.txt');
```

```
echo "File deleted successfully";
```

```
?>
```

1. Appending data in the file

PHP Code:

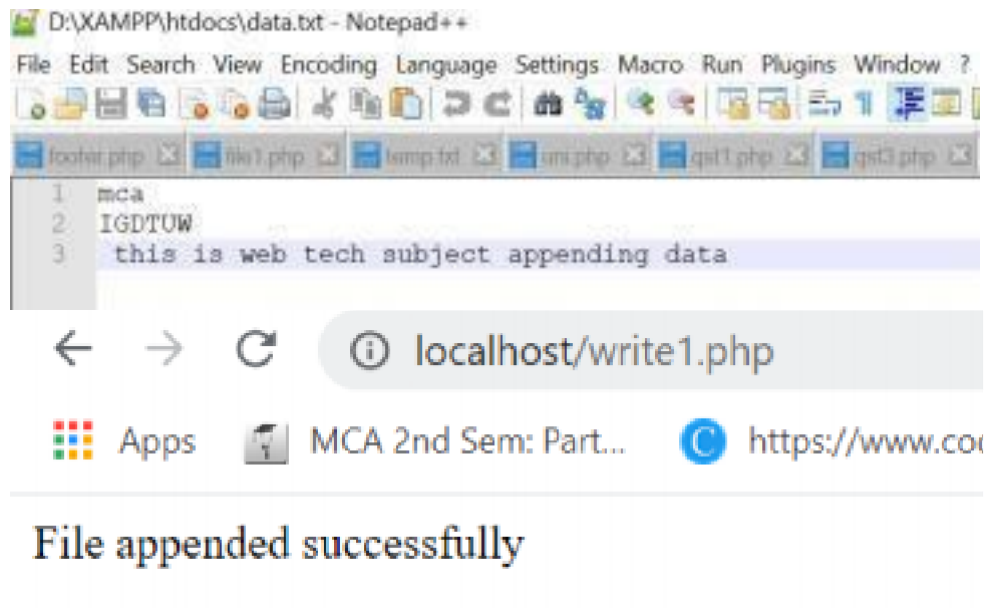

```
<?php
$fp = fopen('data.txt', 'a');//opens file in append mode
fwrite($fp, 'this is web tech subject '); fwrite($fp,
'Appending data');
fclose($fp);
echo "File appended successfully";
?>
```

Output:

File before appending

File appended:

**Ques 3: Use and configure PhpMyAdmin to manage mySQL databases:
Create database University and student table (name, rollno, marks)
and perform following using sql query:**

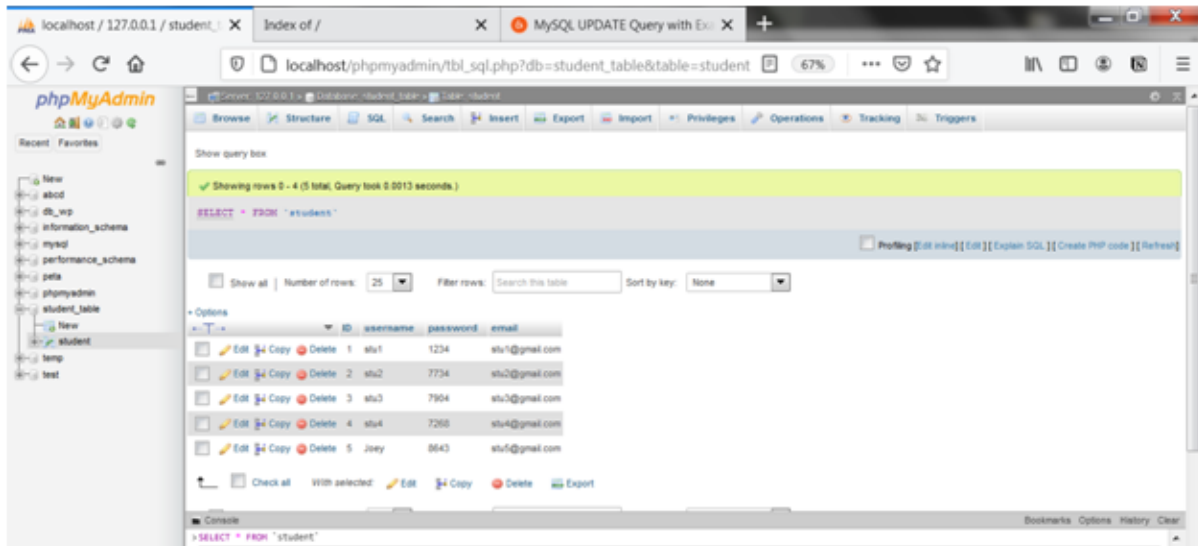

- i.insert 5 records in the table**
- ii.update any records**
- iii.Delete any one record from the student table.**

i)

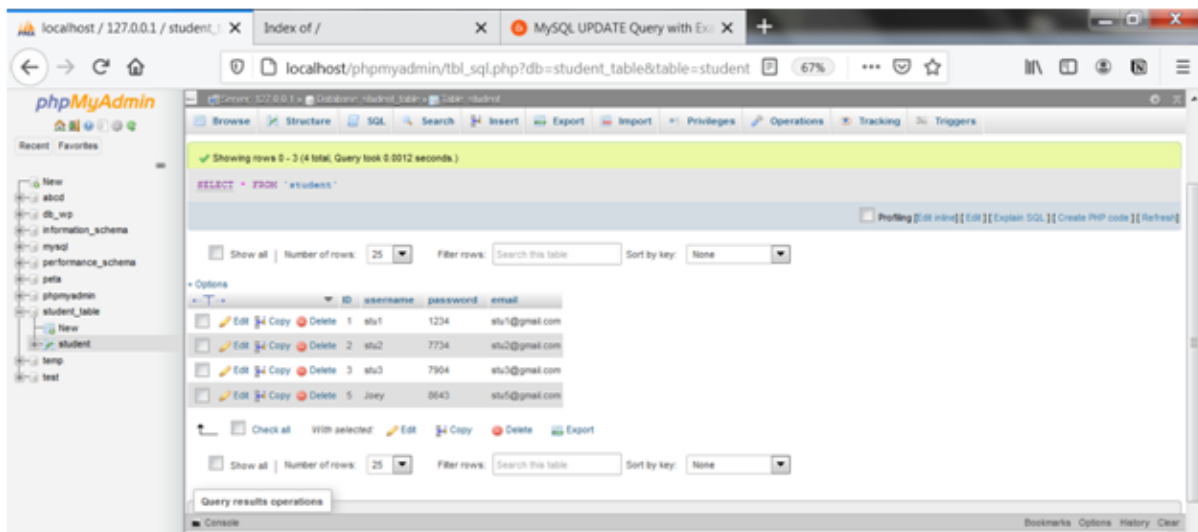

```
INSERT INTO `student`(`ID`, `Name`, `Roll no`, `Marks`) VALUES (1,'Ram','12','40')  
INSERT INTO `student`(`ID`, `Name`, `Roll no`, `Marks`) VALUES (2,'Shyam','14','90')  
INSERT INTO `student`(`ID`, `Name`, `Roll no`, `Marks`) VALUES (3,'Raman','20','50')  
INSERT INTO `student`(`ID`, `Name`, `Roll no`, `Marks`) VALUES (4,'Sam','2','80')
```

- ii.

```
UPDATE `student` SET `ID`=5,`Name`='Mohan',`Roll no`=9,`Marks`=100  
WHERE `ID`=1;
```

iii. DELETE FROM `student` WHERE `ID`=5;

WEEK 13

1. Perform the PHP MySQL connection using PDO :
 - i.create database(University) and table(student)
 - ii.insert records using prepare statement.
 - iii.Delete any record

i) , ii)

<?php

```

//Create connection

/*$conn=new PDO("mysql:host=localhost;dbname=university","root","");*/

$dsn="mysql:host=localhost;dbname=university";
$db_user="root";
$db_pass="";
try{

$conn=new PDO($dsn,$db_user,$db_pass);

//sql to create table
$sql1 = "CREATE TABLE student (
id INT(6),
firstname VARCHAR(30),
lastname VARCHAR(30),
email VARCHAR(50))";

$conn->exec($sql1);
echo "Table student created successfully";

//sql to insert record
$sql2 = "INSERT INTO student VALUES (111,'J3', 'D3d', 'abc@example.com')";

if ($conn->query($sql2) === TRUE) {
    echo "New record created successfully";
}

//Prepare statement

$stmt = $conn->prepare("INSERT INTO student (id,firstname, lastname, email)
VALUES (?, ?, ?, ?)");
$stmt->bindParam(1, $id);
$stmt->bindParam(2, $firstname);
$stmt->bindParam(3, $lastname);
$stmt->bindParam(4, $email);

// insert a row
$id=115;
$firstname = "Rahul";
$lastname = "mn";
$email = "rm@gmail.com";
$stmt->execute();

// insert another row
$id=116;
$firstname = "Shivnai";
$lastname = "Ra";
$email = "sr@yahoo.com";
$stmt->execute();

// insert another row
$id=117;

```

```

$firstname = "soor";
$lastname = "Kapoor";
$email = "sk@gmail.com";
$stmt->execute();

```

```

echo "New records created successfully";

```

?>

2) .Write the queries using PHP mysqli procedural and object oriented:

i) Create the COMPANY DATABASE

ii) Create TABLE EMPLOYEE (Fname, Lname, Eno, Address, Salary, Dname)

iii) Retrieve the name and address of all employees who work for Sales department.

iv) Find the names of employees whose salary is greater than Rs. 20,000/

v) Insert multiple records in the table using multiple_query in mysqli

vi) Update the department from HR to HRSales department

vii) delete employee record whose department is HR

i),ii),v)

```
<?php
$mysql_host='localhost';
$mysql_username='root';$mysql_pwd="";
//CONNECT to the mysql database
$conn=mysqli_connect($mysql_host,$mysql_username,$mysql_pwd,'company');
$query2="CREATE TABLE Employee(eno VARCHAR(3) PRIMARY KEY,fname
VARCHAR(10),lname VARCHAR(10),sal VARCHAR(10),dname varchar(10))";
$result2=@mysqli_query($conn,$query2);
mysqli_close($conn);
?>
